1. **Create the simplest WHILE program that computes the diverge function and compute the codification of its code.**

```
Q = (0,s)
s:
  X1 := X1 + 1;
  while X1 != 0 do
    X1 := X1
  od
```

La primera instruccion es la mas importante para asegurarnos de que el programa siempre diverje. Para esto, nos aseguramos de utilizar un bucle con el minimo cuerpo posible.

```
> CODE2N("X2:=X1+1; while X2!=0 do X1:=0 od")
ans = 10876
```

2. Create an Octave script that enumerates all the vectors.

```
function printNvectors(N)
for i=0:N-1
disp(['(' num2str(godeldecoding(i)) ')'])
end
end
```

```
(
(0)
(0 0)
(1)
(0 0 0)
(1 0)
(2)
(0 0 0 0)
(1 0 0)
(0 1)
(3)
(0 0 0 0 0)
(1 0 0 0)
(0 0 1)
(2 0)
(4)
(0 0 0 0 0 0)
(1 0 0 0 0)
(0 0 0 1)
(0 1 0)
octave:4> █
```

3. Create an Octave script that enumerates all the WHILE programs.

```
function printNwhilePrograms(N)
for i=0:N-1
disp(N2WHILE(i))
end
end
```

```
program = (0, X1:=0)
program = (1, X1:=0)
program = (0, X1:=0; X1:=0)
program = (2, X1:=0)
program = (1, X1:=0; X1:=0)
program = (1, X1:=0)
program = (3, X1:=0)
program = (2, X1:=0; X1:=0)
program = (1, X1:=0)
program = (0, X1:=0; X1:=0; X1:=0)

octave:5> 
```
